Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/763,135

Applicant(s)

DAN ET AL.

Examiner

JEONG S. PARK

Art Unit

2454

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 17 December 2009.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 35, 36, 38-42, 44-52, 54 and 58-63 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 35, 36, 38-42, 44-52, 54 and 58-63 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/17/2009 has been entered.
2. This communication is in response to Application No. 10/763,135 filed on 22 January 2004. The amendment presented on 12/17/2009, which cancels claims 43, 53 and 55, adds new claim 63, and amends claims 35, 36, 38, 39, 40, 44-45, 47, 49-52, 54, 58, 61 and 62, is hereby acknowledged. Claims 35, 36, 38-42, 44-52, 54 and 58-63 have been examined.

Response to Arguments

3. Applicant's arguments with respect to claims 61-63 have been considered but are moot in view of the new ground(s) of rejection.
- A. Summary of Applicant's Arguments
- In the remarks, the applicant argues as follows:

Claims 61-63 require not only that the determinations regarding resource allocation be made according to a monetary value, they also require that the monetary value be determined according to a monetary penalty amount specified by the service level agreement. Patel does not teach or suggest that the monetary value be determined according to such a penalty amount. Furthermore, Fellenstein and Barsness lack this important feature of the Applicant's invention

B. Response to Arguments:

In response to argument, new reference D'Ippolito teaches as follows:

The service violation data unit includes a delivered field for identifying the performance achieved under the metric, an agreed field (equivalent to applicant's threshold performance) for identifying the agreed performance to be provided under the metric according to the service level agreement, a penalty/impact field (equivalent to applicant's monetary penalty amount) for identifying the cost associated with failure to meet the agreed performance under the metric (see, e.g., col. 7, lines 27-52 and figure 8).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 35, 39, 44-48, 54 and 61-63 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fellenstein et al. (hereinafter Fellenstein)(U.S. Patent No. 7,406,691 B2) in view of Barsness et al. (hereinafter Barsness)(U.S. Patent No. 7,379,884 B2), and further in view of D'Ippolito et al. (hereinafter D'Ippolito)(U.S. Patent No. 7,107,496).

Regarding claim 63, Fellenstein teaches as follows:

A method for supporting an application workload (job request from client system 200 in figure 2) using a resource at a remote location (virtual resource 160 in figure 2)(allocating additional resources to a job submitted to a first selection of resources in a grid environment, see, e.g., col. 3, lines 25-36), the method comprising:

assigning a subset of a plurality of server nodes to execute the application workload (grid management system controls distribution of each job to a selection computing systems of virtual resource, see, e.g., col. 7, lines 23-27);

executing the application workload on the assigned subset of the plurality of server nodes (virtual resource handles the request and returns the result, see, e.g., col. 7, lines 28-31);

monitoring execution of the application workload to determine whether a threshold of a performance requirement is met (not meeting performance requirements for a job from client system, then additional resources may be allocated including other resources from external grids, see, e.g., col. 10, lines 1-9);

responsive to a determination that the threshold of the performance requirement is not being met sending a request for at least one server node at the remote location (if

not meeting the performance requirement, then additional resources may be allocated including other resources from external grids, see, e.g., col. 10, lines 1-9); and

receiving from the remote location an acceptance of the request (a grid resource (applicant's remote location resource) is added at 740 in figure 7B, see, e.g., col. 13, lines 7-23) in accordance with the monetary value (decision controller 614 in figure 6 determines resource options to meet performance specification designated for the job request, see, e.g., col. 10, lines 60-67).

Fellenstein does not teach of specifying a number of nodes requested, a time duration for which the requested nodes are needed, and a monetary value associated with the request.

Barsness teaches as follows;

A number of nodes requested (estimates the resources that are needed to complete the request within the required completion time, see, e.g., col. 9, lines 1-5);

a time duration requested (required completion time for the request in the customer's service contract, see, e.g., col. 7, lines 9-13); and

a monetary value associated with the request (determining a price to be charged for performing the request based on the amount of time, see, e.g., col. 2, lines 36-39).

It would have been obvious for one of ordinary skill in the art at the time of the invention to combine Fellenstein with Barsness in order to efficiently assign available resources in the grid environment based on the requested job characteristics.

Fellenstein in view of Barsness do not teach of the threshold performance requirement and a monetary penalty amount for not meeting the threshold performance requirement are specified by a service level agreement.

D'Ippolito teaches as follows:

The service violation data unit includes a delivered field for identifying the performance achieved under the metric, an agreed field (equivalent to applicant's threshold performance) for identifying the agreed performance to be provided under the metric according to the service level agreement, a penalty/impact field (equivalent to applicant's monetary penalty amount) for identifying the cost associated with failure to meet the agreed performance under the metric (see, e.g., col. 7, lines 27-52 and figure 8).

It would have been obvious for one of ordinary skill in the art at the time of the invention to combine Fellenstein in view of Barsness with D'Ippolito to include the agreed field and the a penalty/impact field in the SLA in order to efficiently negotiate a SLA between a service requester and a resource manager.

Regarding claim 35, Fellenstein teaches as follows:

A first application workload executes on a first server cluster (GM 504 in figure 5) having a first domain (local grid) and the remote location (GM510 or GM 520 in figure 5) includes a second domain (grid A or grid B in figure 5) having a second server cluster running a second application workload further comprising:

monitoring execution of the first application workload to determine whether the performance requirements for execution of the first application workload specified in the

service level agreement will continue to be met (not meeting performance requirements for a job from client system, then additional resources may be allocated including other resources from external grids, see, e.g., col. 10, lines 1-9); and

responsive to a determination that the performance requirements for execution of the first application workload will not continue to be met, sending a request to the second domain to assign one or more of the plurality of server nodes in the second server cluster at the second domain to the execution of the first application workload (if not meeting the performance requirement, then additional resources may be allocated including other resources from external grids, see, e.g., col. 10, lines 1-9).

Regarding claim 39, it is rejected for same reason as presented above per claim 63.

Regarding claim 44, Barsness teaches as follows:

The monetary value associated with the request is a payment amount for the number of server nodes requested (determining a price to be charged for performing the request based on the amount of time, see, e.g., col. 2, lines 36-39).

It would have been obvious for one of ordinary skill in the art at the time of the invention to combine Fellenstein in view of Patel with Barsness in order to efficiently assign available resources in the grid environment based on the requested job characteristics.

Regarding claims 45-48, Fellenstein teaches multiple computer systems managed to provide resources (see, e.g., col. 4, line 65 to col. 5, line 51 and 100 in

figure 1), which are capable of running any applications including stock trades as a transaction application and optimization of a stock portfolio as a parallel application.

Regarding claim 54, Fellenstein teaches as follows:

Monitoring one or more of a transaction rate, a transaction response time, availability of a server node, and utilization of a server node (the resource monitor execute performance check that surveys the performance of available resources, see, e.g., col. 11, lines 58-67).

Regarding claims 61 and 62, they are rejected for similar reason as presented above in claim 63.

6. Claims 49-52 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fellenstein et al. (hereinafter Fellenstein)(U.S. Patent No. 7,406,691 B2) in view of Barsness et al. (hereinafter Barsness)(U.S. Patent No. 7,379,884 B2) and D'Ippolito et al. (hereinafter D'Ippolito)(U.S. Patent No. 7,107,496), and further in view of Ellesson et al. (hereinafter Ellesson)(U.S. Patent No. 6,459,682).

Regarding claims 49-52, Fellenstein teaches as follows:

Performance specification (equivalent to applicant's performance requirement) including quality of service specifications compiled from service level objects and agreements (see, e.g., col. 10, lines 38-43); and

a grid environment provides resources with a particular level of service including response time, throughput, availability, security, and the co-allocation of multiple resource types to meet complex user demands, see, e.g., col. 2, lines 31-38).

Fellenstein in view of Barsness and D'Ippolito does not teach of specifying SLA including throughput, response time, availability, downtime and penalty function.

Elleson teaches the well known SLA including the claimed limitations (see, e.g., col. 1, lines 37-55).

It would have been obvious for one of ordinary skill in the art at the time of the invention to combine Fellenstein in view of Barsness and D'Ippolito with Elleson in order to efficiently monitor the performance of a network as measured against multiple SLA agreements.

7. Claims 58-60 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fellenstein et al. (hereinafter Fellenstein)(U.S. Patent No. 7,406,691 B2) in view of Barsness et al. (hereinafter Barsness)(U.S. Patent No. 7,379,884 B2) and D'Ippolito et al. (hereinafter D'Ippolito)(U.S. Patent No. 7,107,496), and further in view of Patel et al. (hereinafter Patel)(U.S. Patent No. 7,043,225).

Regarding claim 58-60, Fellenstein teaches of receiving from the remote location an acceptance of the request (a grid resource (applicant's remote location resource) is added at 740 in figure 7B, see, e.g., col. 13, lines 7-23) in accordance with the monetary value (decision controller 614 in figure 6 determines resource options to meet performance specification designated for the job request, see, e.g., col. 10, lines 60-67).

Barsness teaches of a monetary value associated with the request (determining a price to be charged for performing the request based on the amount of time, see, e.g., col. 2, lines 36-39).

Fellenstein in view of Barsness and D'Ippolito does not teach of determining minimum acceptable payment amount.

Patel teaches as follows:

Receiving the acceptance in accordance with a comparison of the monetary value and a minimum acceptable payment amount (the resource manager determines pricing from the pricing manager and the resource manager generates response based on the pricing information, see, e.g., col. 11, lines 33-48);

wherein the minimum acceptable payment amount (interpreted as the price offered from the resource manager) is determined in accordance with a determination of the value of processing operations performed at the remote location (the offered price from the resource manager is for the specified level of wireless resources, see, e.g., col. 8, lines 48-56); and

the value of processing operations performed at the remote location is determined in accordance with a service level agreement of the remote location (the SLA includes price parameters and service type parameters. The service type parameters include different class or quality of service (QoS) types such as gold, silver, bronze, premium, assured, and best efforts, see, e.g., col. 6, lines 22-42).

It would have been obvious for one of ordinary skill in the art at the time of the invention to combine Fellenstein in view of Barsness and D'Ippolito with Patel in order to

efficiently monitor the performance of a network as measured against multiple SLA agreements.

8. Claims 36, 38 and 40-42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fellenstein et al. (hereinafter Fellenstein)(U.S. Patent No. 7,406,691 B2) in view of Barsness et al. (hereinafter Barsness)(U.S. Patent No. 7,379,884 B2) and D'Ippolito et al. (hereinafter D'Ippolito)(U.S. Patent No. 7,107,496), and further in view of Sankaranarayan et al. (hereinafter Sankaranarayan)(U.S. Patent No. 6,799,208 B1).

Regarding claims 36, 38 and 40-42, Fellenstein in view of Barsness and D'Ippolito teach all the limitations of claims except for receiving a counter offer, sending a response indicating acceptance or rejection of the counter offer, and receiving refusal by denying the request (the examiner interpreted as communications between the resource requestor and the resource providers regarding allocating available resources based on performance requirements and available resources).

Sankaranarayan teaches as follows:

The resource allocation process based on the received request from the application and available resources from the provider (see, e.g., col. 14, line 55 to col. 15, line 54 and figure 6);

the resource manager asks each resource provider identified in the configuration to determine whether it can allocate its resource to the activity (see, e.g., col. 14, lines 60-67 and step 602 in figure 6); and

the resource manager continues successively through each fallback configuration (see, e.g., col. 17, lines 51-64) until finding a configuration that can be satisfied with the currently available resources or discovering that no fallback configuration can be satisfied (see, e.g., col. 17, line 65 to col. 18, line 17).

It would have been obvious for one of ordinary skill in the art at the time of the invention to combine Fellenstein in view Barsness and D'Ippolito with Sankaranarayan to include negotiating method between the resource requester and the resource providers as taught by Sankaranarayan in order to efficiently allocate the available resources to the resource requester based on the availability of resources at the time of requests.

Conclusion

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to JEONG S. PARK whose telephone number is (571)270-1597. The examiner can normally be reached on Monday through Friday 7:00 - 3:30 EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nathan Flynn can be reached on 571-272-1915. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
